

Story of my life so far...

My report is about me and my Lego guns. I started making them at 7 my first Lego guns were just a line of bricks stuck together .

As I got older I got better at making Lego guns by adding more detail .moving How I do the guns is different for different guns like the Thompson and The M1911A1 are different designs. It is easy to make them because I have got years of practise, and if you want to know how to make them and what gun, I can tell you how but its not a good idea to use glue or super glue to make the guns together but if you are a scientist you can make a Lego death ray but if you do not want to make guns than you are free to make what ever you want. Now I am making Lego guns from Lego heavy weapons book by jack street On you tube and try make them better. Leave a comment and subscribe....

M1911 A1 .45ACP RPM 150. 7 mag size .

Thompson M1A1 .45ACP RPM 700. 30 mag size.
